Know Your Container Size

Knowing the size of your container can alleviate issues like using a liner that is too small and falls into a can, or a liner that is too large and hangs over the side—wasting money and plastic. Determine the correct liner size by identifying the gallon capacity of your container with a **Trash Can Sizing Tape Measure**.

AccuFit®

Find the Correct Container & Liner for Your Application

Simply identify the size of the container, how it will be used, and the liner gauge needed. Our guide can help you choose the correct liner for your application to increase efficiency, provide time and cost savings, and reduce plastic consumption.

Types of Plastic:

There are two types of plastics used for trash can liners—linear low density and high density. Both have specific applications where they are more suitable.

SMOOTH & NON-SHARP MATERIALS

Use High Density Polyethylene (HDPE)

Ideal for paper and non-sharp objects under standard transport conditions. Low tear resistance.

ROUGH & SHARP MATERIALS

Use Linear Low Density Polyethylene (LLDPE)

Provides an excellent combination of strength, puncture resistance and tear resistance. Ideal For sharp objects and where transport conditions are tough.

Definitions:

Micron: Measurement of High Density Liners. 25.4 microns is the equivalent to 0.001-inches. Liners range from 6.0 to 24.0 microns.

Mil: Term used in the measurement of Linear Low Density Liners. One mil is equivalent to 0.001-inches. Liners range from 0.35 to 4.0 mil.

*Item may be subject to a MOQ.

***Don't pay for plastic you don't need!** Choose AccuFit® sizing for liners that fit snug and won't fall into the can. **AccuFit®**
