Metal Detectable Heat Resistant Keyhole Loop Tags - Small

Detectamet standard keyhole tag features heat (up to 300°F/150°C) and strength resistance with all round durability - this tag will suit a wide range of applications.

Ask yourself the question - if your answer is YES then read on!

1. Has 2005 EU Food Traceability Legislation affected your business?
2. Do you use a colour coded identification system?
3. Do you use non-metal detectable tags or labels?
4. Are you looking to install or change your current traceability system?
5. Are you looking to improve your current traceability system?

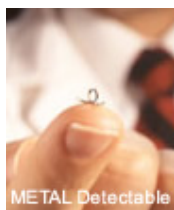

The ****NEW**** range of "Detectamet " Tags have been specifically developed for the food and pharmaceutical industries.

We can offer a range of identification, traceability and loop tags.

The "Detectamet" range of Tags allow small traces of label fragments to be detected, at any stage in the production process. As well as detecting any actual contamination before delivery to its customers, food / pharmaceutical companies will also be able to use the range as a vehicle to print production and batch information, enabling complete tractability. Additional information can also be added to the Detectamet labels & tags in the range.

Detectamet Loop Tag Standard - Is our standard product, with good heat, strength resistance and all round durability - this tag will suit 80% of applications.

Detectamet Tag is a quad laminate material used for tags designed for the food processing environments and detectable by end of line metal detectors.

Tag Colour Available

Pantone Yellow, Pantone Orange, Red 032, Rhodamine Red (Magenta), White, Blue 291, Green 382, Brown 125, & Black

Further information:

Metal detectable labels and tags have been tested and approved for metal detection to 0.5mm² by leading metal detector manufacturers

Offers a range of specialist materials, to cover all conditions and applications i.e. ovens, freezers, wet and chilled conditions

Labels and tags can be ordered from our standard ranges or customised to suit individual requirements

Resistant to delaminating (especially in acid products)
Minimal swarf at perforation, Identification of products by wrapping around tray handles, but not intended for direct food contact.

Detectamet Tag has an 80g thermal transfer printable mid-gloss face paper on one side and an uncoated writing paper on the other side, sandwiching a special metal-detectable aluminum foil and a synthetic strengthening layer.

****NEW**Traceability / Coding or Batch Marking engraving service**
