

# LaCrosse Air Cushion Insole

Supportive and versatile, our Air Cushion insole fits a wide variety of boots and shoes. Designed to add extra cushioning and stability underfoot.

## **POLYURETHANE CONSTRUCTION**

Instead of using a traditional EVA construction, we build our Air Cushion insole with Polyurethane - a material that is more supportive and has better longevity than EVA.

## **DONE RIGHT**

For over 100 years, we've been building the best rubber boots and our accessories are no different. Relentlessly tested in the lab and field, we've engineered our insoles to be a perfect fit with our boots and ensure that they help serve one purpose - to get the job done right.

## **PERFECT MATCH**

With an accommodating shape and size, this insole fits in a wide variety of boots from LaCrosse and other brands.
