Nasco Milk Sampling Ice Chest

Product Number: C06115

Nasco's Milk Sampling Ice Chest was designed especially to maintain constant temperatures in milk samples from farm to laboratory. Will maintain temperatures three times longer than most other coolers. Nasco's Ice Chest exterior and interior walls are made of lightweight, but extremely durable cyclac. A middle ply between the interior and exterior walls is filled with a rigid polyurethane foam to ensure constant temperatures in all weather conditions. The interior is nonabsorbent and easy to clean. Designed with recessed carrying grips and a contact seal top. Milk samples must be in contact with ice or water to be effectively held at a temperature range between 32° and 40° F. The Nasco unit provides this by storing ice and milk samples side by side with a flow-through divider allowing ice water to circulate freely in the box. Dimensions: 16-1/4 in. L x 14 in. W x 9-1/4 in. D. Color: pastel green. Includes cover.

***NOTE:** Wire rack not included.
