## The "Key" Wing Nut Wrench

- ✓ Specifically designed for clamp style wing nuts
- ✓ Extremely lightweight yet very strong
- ✓ Fits both wide and narrow style wing nuts
- ✓ Reduce hand and finger stress caused by hand tightening
- ✓ No adjustment necessary very quick and easy to use
- ✓ Easily fits into a pant or jacket pocket
- ✓ Tightens wing nuts securely without over compressing the clamp gasket
- ✓ Tested and recommended for use by Alfa Laval / Tri-Clover

The **"KEY" Wing Nut Wrench** is a very innovative tool that has been specifically designed to tighten wing nut clamps. The material used to manufacture the wrench, gives it the strength it needs to securely tighten wing nuts far tighter than you can with your fingers, but stops short of over compressing the gasket or bottoming out the clamp bolt.

The **"KEY" Wing Nut Wrench** is very strong, yet extremely lightweight. Unlike wrenches or screwdrivers, the "Key" Wing Nut Wrench weighs only 1.6 ounces and easily fits into a pant or jacket pocket, so it is readily available at all times.

There is no adjustment necessary, making it very quick and easy to use.

When used properly, the **"KEY" Wing Nut Wrench** can significantly reduce hand and finger stress, especially for those assembling and disassembling clamps throughout the day.

Crescent wrenches and screwdrivers have been the tools of choice to tighten wing nuts.

Not recommended by clamp manufacturers, these tools easily over compress the gasket and can bottom out the clamp bolt, causing clamp failure. Dropping them can also cause damage to expensive equipment. These problems are eliminated with the **"KEY" Wing Nut Wrench**.
