Transferpette® electronic Pipette

from BrandTech® Scientific

Certified Ergonomic

The new BRAND® *Transferpette®* electronic pipettes are the first electronic single and multi-channel pipettes with ergonomics and user-friendliness that are certified by an independent testing lab accepted by OSHA as a Nationally Recognized Testing Laboratory (NRTL).

*Gel-loading mode not included on 1000µL and 5mL pipettes.

The *Transferpette®* electronic single channel includes:

- an adjustable finger rest to adapt the pipette to different hand sizes for maximum comfort
- a large, clear LCD screen for easy setting and reference
- five operating modes for convenience and productivity: pipetting; reverse pipetting; mixing; step-dispensing and gel-loading for electrophoresis*.
- a built-in, no-tools calibration system for low lifetime costs
- a rechargeable battery that powers over 4000 pipetting cycles for uninterrupted pipetting between charges
- resilient tip sealing systems that reduce tip mounting and ejection forces without the need for proprietary tips!

The *Transferpette®* electronic multichannel includes:

- all of the control features of the single channel
- an innovative easy-maintenance tip manifold.

Transferpette® electronic Pipette

from BrandTech® Scientific

Large, Clear LCD Screen

All parameters are clearly displayed with letters, symbols, and numbers for easy reference by both left and right-handed users.

Soft Touch Pipetting Key

Greatly reduces pipetting forces and improves accuracy and precision.

Rechargeable Battery

Powers over 4000 pipetting cycles and allows operation during charging. The *Transferpette® electronic* includes a controlled discharge-recharge cycle program that extends battery life.

Autoclavable Pipette Shaft

The pipette shaft (and manifold on multichannels) may be autoclaved for use in sterile applications.

Five Operating Modes

- Pipetting, for routine use
- Reverse Pipetting, for viscous and volatile liquids
- Mixing, repeatedly aspirates & dispenses
- Dispensing, to dispense a series of aliquots in steps from a single fill
- Gel, for gently loading electrophoresis gels and reporting dispensed volume*

* Gel loading mode not available on 1,000µL and 5mL models.

Simple Controls

Control is certified "user-friendly" by an OSHA-accredited testing lab. Built-in electronic Easy Calibration™.

Adjustable Finger Rest

The adjustable finger rest adapts the instrument to different hand sizes.

Upgraded! O-ring design

New O-ring design enhances fit with most major brands of pipette tips. Reduced contact reduces tip mounting forces for a good seal, and likewise reduces ejection forces.

Easy Maintenance Multichannels!

The manifold of the *Transferpette®-8/-12 electronic* has a patented tip cone and seal design that permits easy removal and replacement of individual tip cones and seals with minimal disassembly and without recalibration. Cleaning and maintenance have never been faster, easier or less expensive!
