

# Heavy-Duty Metal Detectable Packaging Cutter

---

## SK107

The SK107 Safety Knife is molded in a 'metal detectable' plastic compound and is for use in food production areas.

Knives that have internal open spaces breed bacteria and open blades cause contamination if they draw blood. The majority of knives have carbon steel blades which rust and are removable. These may drop into the product or packaging. The SK series offers a choice of food contact approved, poly-propylene, Metal Detectable plastic Safety Knives with stainless steel blades.

The heavy duty metal detectable SK107 is a robust, versatile safety knife which features a number of new innovations.

- Fully metal detectable plastic body.
- Stainless Steel fixed blade.
- Pointed nose piercing.
- Hygienic disposable Safety Knife.
- Impact resistant durable polypropylene casing.
