

Introducing

BEKINA STEPLITE/AGRILITE POLYURETHANE BOOTS

Bekina polyurethane (PU) boots are extra lightweight and flexible. PU offers great comfort and durability with thermo-insulating in both cold and warm environments. The self-cleaning sole design offers exceptional traction. PU withstands organic fats, hydrocarbons, mild or dilute chemicals, animal fats, oils, and greases.

A built-in pull-off spur and a moisture absorbing insole add to the comfort and quality of these boots made in Belgium. The steel toe meets ASTM F2413-11 standards. The black boots also have a steel midsole. Choose from five colors to meet all your color-coding requirements. Available in sizes 4 to 15.

WHAT IS POLYURETHANE?

Polyurethane is a foamed material consisting of two components. Both are mixed together to result in an air bubble structure. The combination of the two materials lies at the origin of PU's dual nature being flexible as well as strong and durable.

HIGH QUALITY POLYURETHANE SAFETY BOOTS

ADVANTAGES:

Light as a Feather.

Much lighter than rubber or PVC.

Thermo-Insulating: Cooler in Summer, Warmer in Winter.

High thermo-insulation because of the foamed material consisting of millions of tiny air bubbles. Remains flexible, even at extreme temperatures of -20°C/-4°F.

Durable.

Polyurethane boots are longer lasting than PVC or rubber boots (when used in similar circumstances.) Bekina boots are resistant to oil and fats.
