| Body Material | Low Density Polyethylene (LDPE) |
| Package Of | 400/Dispenser box |
| Description | Transfer Pipette, 8.0 mL, Large Bulb, General Purpose; 400/Box |

MORE ABOUT THIS ITEM

Low-density polyethylene (LDPE) makes these disposable pipettes with built-in bulbs the perfect substitute for breakable glass pipettes, eliminating cross-contamination and cumbersome rubber bulb changes. Plastic reduces the loss of cells and proteins that often occurs with binding that takes place with glass alternatives. Precision manufacturing ensures uniform repeatable drops. Heat seal pipettes to provide liquid-tight transport and storage. These pipettes are suitable for use with a temperature range of -50 to 90°C and can be gas sterilized.
