

PRODUCT INFORMATION

Item #145-0748

Microscope Slides & Dispenser

These new slides have a positive charge that makes the surface ideal for cell, tissue and general sample adhesion. Typical samples have a negative charge and are therefore attracted to the positively charged slide surface, significantly reducing “float”.

Slides are made of high clarity glass, 25 x 75mm and are 1.1mm thick (compatible with most printers). Frosted marking surface on one end. Packed 72 pieces per plastic box / 1440 per case (20 packs).

- Positive charged for cell adhesion
- Frosted on one end
- Choose 90° or 45° cut corners
- *NEW* Slide Dispenser fits 72 slides
