RE: MAGRABAR 10-SN

Dear Mr. Rieck,

MAGRABAR 10-SN is a food grade emulsion containing 10% polydimethyl siloxane (PDMS), silicone dioxide, emulsifier, and preservatives as allowed by the Code of Federal Regulations: Title 21, Section 173.340.

MAGRABAR 10-SN is a reformulated version of MAGRABAR 10-S. The preservative package of MAGRABAR 10-S was modified to extend product shelf life to one year and also to provide cleaner label preservative package for global use.

We have meticulously conducted various internal performance studies and confirm that MAGRABAR 10-SN provides equivalent performance to MAGRABAR 10-S. Since the performance in specific process and operating conditions is impossible to predict with certainty, we advise you to evaluate MAGRABAR 10-SN defoamer prior to use to determine its suitability in your specific application. Please refer to MAGRABAR 10-SN product technical data sheet for detailed technical, application, and storage/handling information.

If you have any questions or should you require further information, please do not hesitate to contact me at (847) 595-1810.

We appreciate your continued business!

Sincerely,

Ravi G. Joshi, PhD
